

JOHN PHILLIP L. MALBAS

Software Developer | Backend Web Developer

San Ildefonso, Bulacan
jpmalbas4@gmail.com
+63 955 339 5861

Bachelor of Science in Information Technology graduate with experience building a full-stack data analytics system to create a meaningful impact on gender analysis through data-driven decisions and gender-sensitive policies. Developer and maintainer of GADInsight—a data analytics platform featuring predictive forecasting and trend analysis. Skilled in Web Programming and Data Analytics (**SQL, Python, Scikit-Learn, Pandas**).

SKILLS

PYTHON, DJANGO, CSS, TAILWIND, REACT.js, TYPESCRIPT, C#, WPF, C++, GIT/GITHUB, JAVASCRIPT, NODE.JS | HTML, REST API, MYSQL, MStest, DOCKER, PyTest, CI/CD, GITHUB ACTIONS, TEAM MANAGEMENT

PROJECTS

More of my works at Github: <https://github.com/Zaido219>

GADINSIGHT

- Designed and developed a custom data analytics platform for the BASC Gender and Development Office using **Python Django** and **Tailwind CSS**, reducing report generation time by an estimated 50% and streamlining data tracking for over 10 office records..
- Integrated **Scikit-learn, Pandas**, and **Matplotlib** into the system's core backend architecture, transforming raw institutional data into actionable, visual intelligence for policy decision-making.

BASCGAD

- Architected and deployed a high-performance **React** and **TypeScript** landing page for the GAD office onto a dedicated institutional subdomain, eliminating dependence on a third-party Wix site builder and optimizing resource utilization with zero additional hosting overhead.

Chess Engine

- Engineered a performant chess engine using **C#** without relying on external libraries.

Windows 10 Notepad clone

- Programmed a native Windows desktop text editor, leveraging the **Win32 API** and **P/Invoke** to interface directly with OS-level window management, custom message loops, and native file I/O operations.

WORK EXPERIENCES

FULL STACK WEB DEVELOPER INTERN

Jan 2026 - April 2026

- Architected a custom data analytics platform for the BASC Gender and Development Office, leveraging **Django** and **Tailwind CSS** to deliver an intuitive, responsive reporting system.
- Implemented data processing and visualization features using **pandas**, **scikit-learn**, and **matplotlib** to handle demographic trends, statistical distributions, and predictive modeling profiles.

GLASS AND ALUMINUM INSTALLATION HELPER

2019 - 2026

- Executed high-volume daily site operations with a 100% on-time task completion rate, consistently meeting demanding operational targets and maintaining a zero-error record in fast-paced environments.
- Balanced demanding full-time manual labor responsibilities while concurrently pursuing higher education, demonstrating exceptional time management, resilience, and self-reliance to successfully fund and complete my studies.

HIGH SPEED SEWING MACHINE OPERATOR

2017 - 2019

- Operated high-speed industrial machinery under tight deadlines, maintaining an average daily output of 300 units while keeping product defect rates below 20% through rigorous quality-control checks.

EDUCATION

- | | |
|---|-------------|
| BACHELOR OF SCIENCE IN INFORMATION TECHNOLOGY, BULACAN AGRICULTURAL STATE COLLEGE | 2022 - 2026 |
| SAN ILDEFONSO NATIONAL HIGH SCHOOL | 2014 - 2015 |
| MAYPAJO INTEGRATED SCHOOL | 2009 - 2010 |

CERTIFICATIONS

• CYBER THREAT MANAGEMENT

Studied foundational principles of network monitoring and threat detection, gaining the practical skills needed to identify system vulnerabilities and defend networks against cyber attacks.

• EXPLORING IOT WITH CISCO PACKET TRACER

Utilized Cisco Packet Tracer to simulate and model complex IoT ecosystems, gaining the practical skills to safely connect virtual sensors, prototype automation network designs, and troubleshoot configurations.

• OPERATING SYSTEMS SUPPORT

Configured and secured major operating systems to support network infrastructure, bridging the gap between hardware and software to optimize network connectivity and system performance.
